

**Sub. H.B. 534\***

124th General Assembly  
(As Reported by H. Health and Family Services)

Rep. Hagan

---

**BILL SUMMARY**

- Requires the Ohio Department of Health to make available on its website information about meningitis and meningitis vaccines.
- Requires the Department to provide written notice to school districts, private schools, and institutions of higher education of the availability of information about meningitis and meningitis vaccines on its website.
- Requires state and nonprofit institutions of higher education and private career schools to provide to students who apply for residence in on-campus student housing a copy of the information from the Department's website about meningitis and meningitis vaccines.
- Prohibits state and nonprofit institutions of higher education and private career schools from providing on-campus student housing to any student who has not provided either written proof of vaccination against meningitis or a signed vaccination waiver form.

---

**CONTENT AND OPERATION**

**Background: meningitis in college students**

Meningococcal meningitis is a rare but potentially fatal bacterial infection most commonly expressed either as meningitis, an attack of the brain and spinal cord, or meningococemia, an accumulation of the bacterium *Neisseria meningitidis* in the blood.

---

\* This analysis was prepared before the report of the House Health and Family Services Committee appeared in the House Journal. Note that the list of co-sponsors and the legislative history may be incomplete.

*Neisseria meningitidis* is a leading cause of meningitis and blood poisoning in teenagers and young adults in the United States. According to the Meningitis Foundation of America, meningitis and meningococemia can cause permanent brain damage, hearing loss, learning disability, organ failure, loss of limbs, or death. Meningococcal meningitis is transmitted through air droplets and by direct contact with infected persons. Early symptoms of meningococcal meningitis, which may include high fever, headache, stiff neck, confusion, nausea, vomiting, exhaustion, and rash, are often misdiagnosed as a less serious infection, such as influenza. Undetected, the disease can progress rapidly, often within hours of the first signs of symptoms.

Studies show that young people age 15 to 24 years are at greater risk of contracting meningococcal meningitis, and that in recent years there has been an increase in the number of college outbreaks. Freshmen living in dormitories are found to have a sixfold increased risk for the disease. The Meningitis Foundation reports that the Centers for Disease Control and Prevention now recommends college students, particularly freshmen living in dormitories, learn more about meningococcal meningitis and consider vaccination.<sup>1</sup>

### **Duties of the Department of Health**

(sec. 3701.133)

The bill requires the Ohio Department of Health to make available on its website information about the risks associated with meningitis and the availability and effectiveness of meningitis vaccines.<sup>2</sup> The Department must also provide written notification of the availability of meningitis information on its website to the following:

- (1) Each public school district;
- (2) Each nonpublic school, whether chartered, nonchartered, or nontax supported, that enrolls students in ninth grade or the equivalent educational level;
- (3) Each community school that enrolls students in ninth grade or the equivalent education level;

<sup>2</sup> "Vaccine" is not defined in the bill. However, according to *Webster's Ninth New Collegiate Dictionary*, "vaccine" refers to the preparation of killed microorganisms administered to increase immunity to a particular disease. "Vaccination" refers to the act of administering a vaccine.

- (4) Each state institution of higher education;
- (5) Each nonprofit institution of higher education;<sup>3</sup>
- (6) Each private career school.<sup>4</sup>

**Vaccination for students in on-campus housing**

(secs. 1713.55, 3332.25, and 3345.85)

The bill prohibits any state institution of higher education, nonprofit institution of higher education, or private career school from allowing a student who has not been vaccinated against meningitis from residing in the institution's on-campus housing unless the requirement is waived at the request of the student or the student's parents.<sup>5</sup>

A state or nonprofit institution of higher education or private career school, on receiving a student's application for residence in the institution or school's on-campus student housing, must inform the student of the meningitis vaccination requirement and provide the student with a copy of the information from the Department of Health's website about meningitis and the availability and efficacy of meningitis vaccines. To be permitted to reside in the institution or school's on-campus student housing, a student must present to the institution or school either written proof of vaccination against meningitis by a vaccine approved by the Department of Health or a waiver form signed by the student or, if the student is younger than 18, the student's parent, to release the student from the vaccination requirement.

The institution or school must also inform the student of the vaccination requirement waiver process. The institution or school must provide to any student or parent who requests it a waiver form.<sup>6</sup> The form must include a statement for

---

<sup>3</sup> As defined by the bill, "nonprofit institution of higher education" means a nonprofit college, university, or other institution that offers instruction in recognized academic and professional fields of study, and awards degrees for fulfilling requirements of academic work beyond high school.

<sup>4</sup> Private career schools provide career training at the post-secondary level.

<sup>5</sup> "On-campus housing" means a dormitory or other student residence that is owned or operated by, or located on the campus of, a state institution of higher education, nonprofit institution of higher education, or private career school.

<sup>6</sup> As defined by the bill, "parent" means either parent, except that if one parent has sole custody, "parent" means the parent with custody. "Parent" also includes a guardian or,

the student or, if the student is younger than 18, the student's parent to sign in acknowledgement of having received and read the information about meningitis provided by the institution or school. The institution or school must waive the vaccination requirement for any student who returns a signed waiver form to the institution or school.

The bill states that it does not require an institution or school to provide or pay for any student's vaccination against meningitis.
