

H.B. 142

125th General Assembly
(As Reported by H. Health)

Reps. Hagan, Willamowski, Schmidt, Setzer, Husted, Schaffer, Seitz, Kearns, Gilb, McGregor, Hoops, Jolivette, Collier, White, Williams, Hollister, Reinhard, Miller, Otterman, Redfern, Allen, Carano, D. Evans, Barrett, Chandler, Ujvagi, S. Smith, Hollister, Yates, Williams, DeBose, White, Reidelbach, Taylor, Schneider, Beatty, Jolivette

BILL SUMMARY

- Requires the Ohio Department of Health to make available on its website information about meningitis and meningitis vaccines and a meningitis vaccination status statement form.
- Requires the Department to provide written notice to school districts, private schools, and institutions of higher education of the availability of information about meningitis and meningitis vaccines on its website.
- Requires state and nonprofit institutions of higher education and private career schools to provide to students who apply for residence in on-campus student housing a copy of the meningitis vaccination status statement from the Department's website.
- Effective in 2004, prohibits state and nonprofit institutions of higher education and private career schools from providing on-campus student housing to any student who has not submitted a signed meningitis vaccination status statement form.

CONTENT AND OPERATION

Background: meningitis in college students

Meningococcal meningitis is a rare but potentially fatal bacterial infection most commonly expressed either as meningitis, an attack of the brain and spinal cord, or meningococcemia, an accumulation of the bacterium *Neisseria meningitidis* in the blood.

Neisseria meningitidis is a leading cause of meningitis and blood poisoning in teenagers and young adults in the United States. According to the Meningitis Foundation of America, meningitis and meningococemia can cause permanent brain damage, hearing loss, learning disability, organ failure, loss of limbs, or death. Meningococcal meningitis is transmitted through air droplets and by direct contact with infected persons. Early symptoms of meningococcal meningitis, which may include high fever, headache, stiff neck, confusion, nausea, vomiting, exhaustion, and rash, are often misdiagnosed as a less serious infection, such as influenza. Undetected, the disease can progress rapidly, often within hours of the first signs of symptoms.

Studies show that young people age 15 to 24 years are at greater risk of contracting meningococcal meningitis, and that in recent years there has been an increase in the number of college outbreaks. Freshmen living in dormitories are found to have a sixfold increased risk for the disease. The Meningitis Foundation reports that the Centers for Disease Control and Prevention now recommends college students, particularly freshmen living in dormitories, learn more about meningococcal meningitis and consider vaccination.¹

Duties of the Department of Health

(sec. 3701.133)

The bill requires the Ohio Department of Health to make available on its website information about the risks associated with meningitis and the availability and effectiveness of a vaccine.² The Department must also provide written notification of the availability of meningitis information on its website to the following:

- (1) Each public school district;
- (2) Each nonpublic school, whether chartered, nonchartered, or nontax supported, that enrolls students in ninth grade or the equivalent educational level;
- (3) Each community school that enrolls students in ninth grade or the equivalent education level;

¹ *The Meningitis Foundation of America*, <http://www.musa.org/facts.html>, visited 3-20-02.

² "Vaccine" is not defined in the bill. However, according to *Webster's Ninth New Collegiate Dictionary*, a "vaccine" is the preparation of killed microorganisms administered to increase immunity to a particular disease. "Vaccination" is the act of administering a vaccine.

- (4) Each state institution of higher education;
- (5) Each nonprofit institution of higher education;³
- (6) Each private career school.⁴

The bill also requires the Department to make available on its website, in a format suitable for downloading, a meningitis vaccination status statement form for a student, or, if the student is younger than 18 years of age, the student's parent, to complete to disclose whether the student has been vaccinated against meningitis. The form must include the following:

(1) The information that the bill requires the Department of Health to make available on its website regarding meningitis, the risks associated with meningitis, and the availability and effectiveness of a vaccine and a means for the student or the student's parent to acknowledge having received and read the information;

(2) A space for the student or the student's parent to indicate that either (a) the student has been vaccinated against meningitis or (b) the student has not been vaccinated against meningitis, but will consider being vaccinated within a year of the date that the form is signed.

Vaccination for students in on-campus housing

(secs. 1713.55, 3332.25, and 3345.85)

The bill prohibits any state institution of higher education, nonprofit institution of higher education, or private career school from allowing a student who has not submitted a signed meningitis vaccination status statement form from residing in the institution's on-campus housing.⁵ On receiving a student's application for residence in on-campus student housing, an institution or school subject to the bill must inform the student of the disclosure requirement and provide the student with a copy of the meningitis vaccination status statement from the Department of Health's website.

³ As defined by the bill, "nonprofit institution of higher education" means a nonprofit college, university, or other institution that offers instruction in recognized academic and professional fields of study, and awards degrees for fulfilling requirements of academic work beyond high school.

⁴ Private career schools provide career training at the post-secondary level.

⁵ "On-campus housing" means a dormitory or other student residence that is owned or operated by, or located on the campus of, a state institution of higher education, nonprofit institution of higher education, or private career school.

The bill states that it does not require an institution or school to provide or pay for any student's vaccination against meningitis.
